Israeli Prime Minister visits Steakholder Foods to experience cutting-edge 3D printing technologyÂ

21 April 2023 | News

Became the first Prime Minister to ever taste 3D-printed cultivated fish

Became the first Prime Minister to ever taste 3D-printed cultivated fish

Steakholder Foods Ltd, an international deep-tech food company at the forefront of the cultivated meat industry, announced that it was proud to host Benjamin Netanyahu, Prime Minister of Israel, who explored the latest advancements in cultivated meat and 3D bio-printing and tasted 3D-printed cultivated fish and meat products at the cutting edge of food tech.

During his visit, the Prime Minister had the opportunity to tour the company's facilities, see firsthand how Steakholder Foods' industrial-scale 3D bio-printer works, and learn about its potential to print tons of cultivated meat per day. He said that there is a global revolution in how humanity is producing food, and emphasised that his government is working to help companies move forward in order to maintain a technological lead. He then tasted a 3D-printed cultivated fish fillet, printed with Steakholder Foods' customised bio-inks using Umami Meats' fish cells. The tasting also included Steakholder Foods' beef product grown with ethically harvested cells in the Company's facilities.
