

BASF bags certificate on sustainable castor products

09 September 2022 | News

BASF is the first chemical company to be certified according to the SuCESS (Sustainable Castor Caring for Environmental & Social Standards) Code and has successfully finished the certification process by an external body. The production site in DÃ¼sseldorf-Holthausen, Germany is also the first site in the personal care industry to be certified. BASF has now started supplying its first sustainable castor ingredients to the personal care industry.

BASF is the first chemical company to be certified according to the SuCESS (Sustainable Castor Caring for Environmental & Social Standards) Code and has successfully finished the certification process by an external body. The production site in DÃ¼sseldorf-Holthausen, Germany is also the first site in the personal care industry to be certified. BASF has now started supplying its first sustainable castor ingredients to the personal care industry.

BASF, Arkema, Jayant Agro-Organics, and the international civil society organisation Solidaridad launched project â??Pragatiâ?? in May 2016 to improve working conditions, create awareness for sustainable farming and increase yields thanks to more efficient farming practices. The Pragati project was driven by a baseline survey of more than 1,000 castor farmers in Gujarat, where the majority of the worldâ??s castor supply originates.

The goal is to support the sustainable production of castor beans to establish sustainable supply chains that amongst others increase the yields and income of the farmers. Since the project was initiated, more than 5,800 smallholders and over 13,300 hectares of land have been certified for sustainable castor cultivation.

The Code SuCCESS is designed by multiple partners and stakeholders to ensure the objective of Pragati project and to develop sustainability principles for castor seeds that will guide and further allow castor producers to offer certified sustainable castor in the global market.

The SuCCESS Code adopted 11 principles of ownership and provides smallholders with on-field support for ensuring monitoring and compliance with 41 mandatory and 25 non-mandatory control points. Only SuCCESS-certified Sustainable Castor Association (SCA) members can claim to supply sustainable castor products.
