China's Heilongjiang Institute and Qingdao Guoxin Blue Silicon Valley Development Co., Ltd. signed a strategic cooperation agreement on May 27 on salmon and trout. In Qingdao Haitian Center, an exclusive forum on the development of large-scale farming ships of high quality was held.

The "Strategic Cooperation Framework Agreement for the High-quality Development of the Salmon and Trout Industry" deal is signed by Wang Yumei and Zhao Yu on behalf of Heilongjiang Institute of the Chinese Academy of Water Sciences and Qingdao Guoxin Blue Silicon Valley Development Co., Ltd.

Leaders from Shandong Province and Qingdao City attended the ceremony, including Wang Xiaohu, President of the Chinese Academy of Fishery Sciences, Wang Jianhui, Chairman of Qingdao Guoxin Group, Zhao Yu, General Manager, Wang Yumei, Secretary of Heilongjiang Institute's Party Committee, and Wang Bingqian, Director of the Research Office of Aquatic Genetics, Breeding and Biotechnology.

Salmon genetics and breeding innovation team of the Heilongjiang Institute providing Guosen Group with all-round support for the cultivation of new species of sea-suitable salmon, seed supply and breeding technology.

Wang Yumei said that the Heilongjiang Institute will rely on the content of the strategic framework agreement, give full play to its own cold-water fish research and talent advantages, and cooperate with Qingdao Guoxin to carry out deep-sea aquaculture research on high-economic-value salmon and trout, and jointly promote the entire chain of China's salmon and

trout industry. construction and high-quality development.

Zhao Yu, said, "Guoxin Group's 2.0 series of breeding workboats will start construction one after another in 2023, and the demonstration fleet of breeding workboats has begun to take shape".

Guoxin Group, the Chinese Academy of Water Sciences and Heilongjiang Institute hold a long-term partnership and mutual support to Blue Silicon Valley of China. Blue Silicon Valley and the Heilongjiang Institute of the Chinese Academy of Water Sciences will jointly explore and create a comprehensive mass production of salmon and trout in the deep sea mode, and jointly promote the industrialization process of salmon and trout in the deep sea and the high-quality development of the marine fishery economy.

At the signing ceremony, theme activities were conducted in honor of the first 100,000-ton smart fishery large-scale farming ship in the world "Guoxin No. 1" and "Guoxin No. 2-1" and "Guoxin No. 2-2" construction activities of Guoxin's new generation of standardized breeding ships.
