Mandolin offers citrus growers a solution to promote size and quality improvements in mandarins

Mandolin offers citrus growers a solution to promote size and quality improvements in mandarins

AMVACÂ®, a global technology solutions provider in agriculture, has addedÂ MandolinÂ® plant growth regulator specifically formulated for thinning citrus fruit, to its citrus product portfolio. Mandolin received EPA registration in California for use on mandarins, including tangerines, tangelos, tangors and clementines, as well as oranges.Â Â

By effectively thinning immature fruit at the appropriate time, Mandolin offers citrus growers a solution to promote size and quality improvements in mandarins. Mandolin helps growers combat problems caused by overcrowded fruit, such as limited quality and carbohydrate drain, which can weaken trees and make them more susceptible to pests and sun damage.Â

Mandolin is an addition to AMVACâ??s citrus product portfolio, which includesÂ AbbAÂ ULTRAÂ®Â miticide/insecticide helping growers fight damaging mites and insects;Â CitrusÂ FixÂ® plant growth regulator that provides preharvest fruit-drop control;Â DeadlineÂ®Â molluscicide products for fast, effective, and long-lasting control of slugs and snails; andÂ KrovarÂ® DFÂ CropÂ herbicide with two modes of action for built-in resistance management and residual control of key annual and perennial broadleaf and grass weeds.Â
