Partnerships to promote the safety of the energy storage industry and the global transition to green, low-carbon energy.

Partnerships to promote the safety of the energy storage industry and the global transition to green, low-carbon energy.

HiTHIUM Energy Storage Technology (HiTHIUM) of Xiamen, China and TÜV Rheinland of Mainland China (hereafter TÜV Rheinland) announced in August A strategic partnership agreement was signed in Xiamen on the 8th. The two companies will cooperate comprehensively and comprehensively in the field of energy storage products, including energy storage innovation, full-chain innovation, professional development and global market application. We also work to promote the safety of the energy storage industry and the global transition to green, low-carbon energy.

According to the agreement, the two companies will mainly collaborate on certification and testing services for high-capacity lithium energy storage products. As a battery energy storage system (BESS) professional company, HiTHIUM has leading energy storage battery technology and research, development and manufacturing capabilities.

Leveraging TÜV Rheinland's leading certification and testing of energy storage products, HiTHIUM will be able to advance its energy storage product compliance to international standards and increase the safety and reliability it offers to its global customers. Through resource sharing and complementary advantages, the two companies will continue to target the global energy storage market, cooperating in product technology, talent training, brand building, etc., to create mutually beneficial solutions in this comprehensive energy storage era. We aim to achieve development.
