Provided new ideas for the intelligent development of Korean agriculture to farmers with scientific and technological innovation

Provided new ideas for the intelligent development of Korean agriculture to farmers with scientific and technological innovation

Heilongjiang Huida Technology Co., Ltd., China's leading manufacturer of agricultural drones, tractor autopilot systems and intelligent water-saving irrigation systems, worked with the staff of South Korea's Cheonpoong Co., Ltd and its dealers in Jinju and Jeongeup to conduct smart agricultural machinery product demonstrations for the personnel of agricultural machinery agencies and related civil servants.

The product demonstrations include 408 Beidou navigation agricultural machinery autopilot systems and HD540Pro agricultural drones, offering a feast of agricultural achievements of science and technology. The presentation fully demonstrated the intelligence, accuracy and reliability of HUIDA TECH's agricultural machinery and received unanimous praise from on-site personnel. It also made more people realize the important epochal significance and social value of modern agricultural construction, and provided new ideas for the intelligent development of Korean agriculture.

HUIDA TECH provides agricultural production and operation entities smart agricultural machinery for plowing, planting, managing and harvesting, changing the traditional agricultural plant protection method from the source, reducing production costs and improving operating efficiency. HUIDA TECH's HD540Pro agricultural drones have stable and comprehensive performance and are easy to operate. The separation of human and pesticide and the precise pesticide dosage control can not only reduce costs, but also further protect farmers' lives safety and environmental protection.

HUIDA TECH is constantly exploring the Korean market. In the future, it will layout 60 outlets and is expected to cooperate with 500 agricultural cooperatives and dealers so as to gradually realize the refinement, high efficiency and greenness of agriculture and ensure the safety of agricultural products, the improvement of agricultural competitiveness and the sustainable development of agriculture." said Jack Ren, Overseas Sales Director of HUIDA TECH.
