The collaboration aims to establish a cutting-edge manufacturing plant in Singapore

Blue Aqua International, a prominent aquaculture farming technology and farm care manufacturing company, and SCD Probiotics, a global leader in probiotic solutions, have recently announced an exciting joint venture. The collaboration aims to establish a cutting-edge manufacturing plant in Singapore, focusing on the production of sustainable and natural microbial biochemical solutions tailored for the global aquaculture market.

Dr. Farshad Shishehchian, CEO and founder of Blue Aqua, expressed his enthusiasm about the partnership, stating, “We are thrilled to collaborate with SCD Probiotics to establish a world-class manufacturing facility in Singapore. This partnership positions us to provide top-notch probiotics and enzymes to meet the surging global demand, in addition to expanding our portfolio to include SCD Probiotics products for aquaculture.”

Matt Wood, founder and CEO of SCD Probiotics, shares in the excitement, saying, “Our mission at SCD Probiotics is to reduce chemical and antibiotic use worldwide by replacing these with beneficial, probiotic technologies. Partnering with Dr. Shishehchian and Blue Aqua, we can make a significant impact in the region and provide probiotic alternatives to farmers that benefit both the health of aquatic life and the health of the eco-system.”

The joint venture between Blue Aqua International and SCD Probiotics marks a significant milestone for both organizations, signifying a substantial step forward in the advancement of sustainable aquaculture practices worldwide. The manufacturing facility is anticipated to commence operations in early 2025, with a resolute commitment to ongoing research and development, ensuring the continuous enhancement of probiotic and enzyme solutions across diverse applications.
