

Nouryon first to obtain ISCC PLUS certification for green MCA

18 December 2023 | News

The Company is a leading global supplier of MCA and the first and only producer of green MCA

The Company is a leading global supplier of MCA and the first and only producer of green MCA

Nouryon, a global speciality chemicals leader, announced that it is now certified to the International Sustainability and Carbon Certification standard ISCC PLUS for the production of green monochloroacetic acid (MCA) at its site in Delfzijl, the Netherlands. The Company is a leading global supplier of MCA and the first and only producer of green MCA that is derived from sustainably sourced raw materials.

“We are pleased to be the first supplier to offer green MCA as a building block for our customers that contributes to their sustainability goals,” said Joppe Smit, Senior Vice President of Natural Resources and Intermediates at Nouryon. “Today’s announcement underscores our efforts to deliver solutions that contribute to a more sustainable future.”

MCA is used in the manufacture of carboxymethyl cellulose (CMC), agrochemicals, surfactants, and other functional chemical building blocks that are essential to building and construction, crop protection, food additives, personal care products, cleaning goods, and pharmaceuticals. Nouryon’s green MCA is a sustainable alternative offering a significant reduction in product carbon footprint while delivering the same quality and performance.

As a manufacturer of speciality chemicals, Nouryon works to ensure that its products meet or exceed industry benchmarks for sustainability without sacrificing performance. Learn more about the Company’s overall strategy to reduce Scopes 1, 2, and 3 emissions water-use intensity, and other sustainability targets.
