Castoma is the first milk-based stomach pain relief product available in Korea to enhance the anti-inflammatory ability of quantum nanoparticles called Nano Curcumin

Castoma, a new breakthrough dairy supplement that can support those suffering from stomach disease, has been launched in Korea. Castoma aims to provide relief and comfort to millions of people who struggle with stomach problems such as gastritis, ulcers, and reflux.

Castoma is the first milk-based stomach pain relief product available in Korea. Characterized by Nano Curcumin essence, it has the effect of inhibiting HP bacteria 40 times more than regular turmeric powder. Castoma helps improve intestinal problems.

Castoma, the dairy supplement, uses curcumin as its main ingredient to treat stomach ulcers. Here are some key features of the innovative therapeutic product.

- Inhibits HP bacteria (*Helicobacter Pylori*) 40 times more than regular turmeric powder and inhibits the growth of 65 HP strains.
- Reduces factors that attack the stomach: Curcumin reduces the secretion of gastric acid and pepsin, reducing the activity of substances that promote inflammation in the body.

- The product increases gastric mucosal protective factors: by increasing mucus concentration and increasing nitric oxide in mucus. Thus, induces anti-inflammation and quickly heals ulcers on the stomach lining.

The product brings back great benefits to actively support the treatment of peptic ulcers, but Curcumin is poorly soluble in water, with less than 1% absorption in the intestine, causing limitations in treatment. To surmount this limitation, Castoma has been applied nanotechnology to bring Curcumin molecules to the size of microscopic molecules, which are nanoparticles, collectively called Nano Curcumin, hence optimizing the absorption and effectiveness of this powerful natural compound.

Based on the effective anti-inflammatory ability of quantum nanoparticles, they go deep into the stomach and inhibit the growth of HP bacteria - a harmful agent that accounts for up to 80% of the causes of illness in people with stomach diseases nowadays. Castoma with nanotechnology which supports the treatment of stomach pain, is available in milk form and can be consumed daily.
