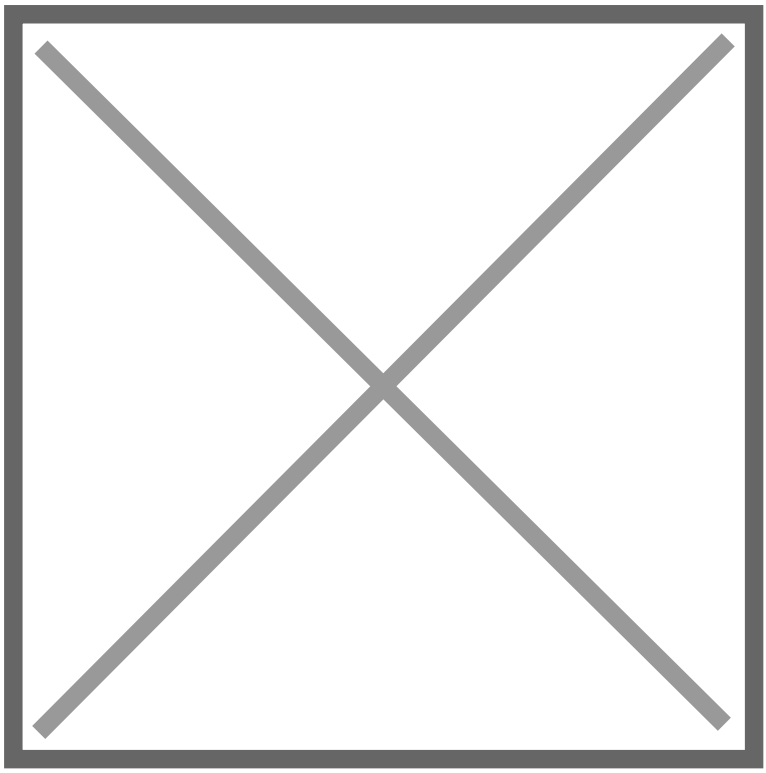
Total investment capital at Vietnam site reaches more than $500 million

Total investment capital at Vietnam site reaches more than $500 million

NestlÃ© Vietnam has announced an additional investment of $100 million to increase the capacity of NestlÃ© Tri An factory, Dong Nai province, bringing the total investment capital at this factory to more than $500 million.

The additional investment in the NestlÃ© Tri An factory will help increase capacity and capacity to meet the increasing demand for coffee, continuing to make the Vietnamese market a center for coffee production and supply. High value for domestic and world markets.

To date, NestlÃ© Group has invested nearly $830 million through NestlÃ© Vietnam Co., Ltd. with 4 factories and 2 distribution centers.Â In Dong Nai province alone, the company is operating 3 factories, of which NestlÃ© Tri An is one of NestlÃ©'s largest manufacturing factories in Vietnam.Â This is also one of the Group's coffee processing factories with the most modern scale and technology in the region.Â Currently, the factory is producing coffee products with familiar brands including NESCAFÃ?, NESCAFÃ? Dolce Gusto, NESPRESSO, Starbucks and Blue Bottle.



Currently, coffee products produced at NestlÃ© Tri An factory have been exported to more than 29 countries around the world.Â In addition, NestlÃ© is also the largest coffee purchasing unit with a total annual purchasing cost from Vietnam of up to $700 million.

Binu Jacob - General Director of NestlÃ© Vietnam - said: "The project is a testament to NestlÃ©'s long-term investment commitment in Vietnam.Â It is expected that when the project comes into operation, the factory's capacity will increase, meeting the domestic market's consumer demand and effectively exploiting the export potential, making Vietnam a coffee supply center. High value coffee for the world.Â At the same time, through this project, we also hope to create many job opportunities and continue to expand long-term investment activities in Vietnam, contributing to sustainable economic development and prosperity of the country".

Sustainable coffee production is one of NestlÃ©'s important directions in Vietnam.Â Besides investing in production technology, NestlÃ© Tri An factory is always a pioneer in sustainable development through the use of clean energy, biomass energy, and application of circular economy in quality management. waste and conserve water resources.

Accordingly, each year NestlÃ© Tri An factory can reduce more than 14,000 tons of CO2 emissions during coffee processing.Â In addition, 100% of coffee grounds after production are reused by the factory as biomass raw materials.Â Wastewater from the coffee production process is also treated, recycled, and reused in the boiler, helping the factory save more than 112,000 m3 of water/year.

At the same time, with the desire to contribute to improving the quality of Vietnamese coffee beans, since 2011, NestlÃ© has implemented the NESCAFÃ? Plan program in the Central Highlands region.Â The program has also brought positive solutions to sustainably develop the Vietnamese coffee industry from distributing high-quality seedlings, farming according to regenerative agriculture, protecting water resources and biodiversity. learn.
