In June 2024, 904 batches of imported plant products entered the Russian Chelyabinsk region under the supervision of officials from the Ural Interregional Administration of Rosselkhoz nadzor: 14.4 thousand tons of fruit and vegetable products, melons, flour, malt and 158.7 thousand pieces of flower products.

Quarantine products were imported into the region from Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan, Turkmenistan and China.

As part of the cargo inspection, employees of the Department took samples in cooperation with specialists from the Chelyabinsk branch of the Federal State Budgetary Institution "VNIIZZH". There were 36 cases of products contaminated with quarantine objects detected during laboratory tests: 7 cases of oriental codling moth were detected in 123.2 tons of peaches and apricots; 25 cases of quarantine scale insect were detected in 204 tons of apricots, plums, apples, and nectarines. Measures have been taken in relation to contaminated quarantine products in accordance with current legislation.

Products that meet phytosanitary requirements are permitted to be imported into the territory of the subject and are allowed for sale.
