Enhanced Nature (EN) expands global supply chain for AMF Bionutrient augmenting production in India

25 November 2024 | News

AMF (arbuscular mycorrhizal fungi) bionutrients produced at cutting edge manufacturing facility in Delhi, India

AMF (*arbuscular mycorrhizal fungi*) bionutrients produced at cutting edge manufacturing facility in Delhi, India

Enhanced Nature (EN), a newly formed US company, today announced that it has begun operations to supply AMF (*arbuscular mycorrhizal fungi*) bionutrients to partners worldwide from its cutting edge manufacturing facility in Delhi, India.

ENâ??s founding partner Symbiotic Sciences has been manufacturing the highest quality concentrated AMF for over 15 years, and these AMF bionutrients are now available to partners exclusively through EN. Other founding partners include Aditya Malhotra (CEO) and Tom Laurita (Board Chair). Rob Gibson has joined Enhanced Nature as VP Business Development and Sales.

â??When Symbiotic Sciences began manufacturing and supplying AMF-based bionutrients over 15 yearsÂ ago, many companies were either not aware of the value AMF brings to agriculture â?? or they hadnâ??t evenÂ heard of itâ?, said Enhanced Natureâ??s CEO Aditya Malhotra.Â â??That meant we and others had to educate theÂ market and do years of trials in the Americas and elsewhere. Today the landscape is different, and AMFÂ is recognized as a foundational bionutrient for both high value and row crop applications. ThisÂ transformation makes now the right time to launch Enhanced Nature.â?

Co-founder and Board Chair Tom Laurita commented,Â â??I have been CEO of leading companies in the AgÂ biotech space, so I know that product manufacturing and scale up are huge challenges. EN is in anÂ enviable position to grow sales rapidly because Symbiotic Sciences has really cracked the manufacturingÂ nut. Their products are among the highest quality and most concentrated AMF-based bionutrients beingÂ made anywhere in the world. As the exclusive supplier of these products,

EN will quickly establish itselfÂ as a major player in the bionutrient space.â?•

â??I have done R&D and BD in the bionutrient and biocontrol industry for over ten years during my time atÂ Novozymes and Certisâ?•Â said Rob Gibson, VP BD and Sales.Â â??Over this period I have observed the growthÂ in market awareness of the value and the impact of AMF as a vital component of any complete bionutrientÂ package. EN is already seeing tremendous demand everywhere for AMF sourced from a reliable andÂ high quality manufacturer. Both distribution partners and end-users are looking for the next generation ofÂ effective high ROI biologicals, and AMF definitely fits that description. Iâ??m really excited about this teamÂ and opportunity.â?•
