

China's XAG reveals its 2025 product portfolios to unfold Smart Agriculture Ecosystem

11 December 2024 | News

Themed "Future Farming Unfolds," the XAAC 2024 reflected XAG's 11-year journey of innovation in agriculture

Themed "Future Farming Unfolds," the XAAC 2024 reflected XAG's 11-year journey of innovation in agriculture

China based global smart agriculture technology company, XAG held its Annual Conference (XAAC 2024) under the theme "Future Farming Unfolds", marking a major milestone in XAG's journey to build a fully integrated agriculture ecosystem. Centered around four critical agricultural stages—land preparation, sowing, crop management, and harvesting—the conference showcased XAG's 2025 product lineup, including P150/P60 Agricultural Drone, APC2 AutoPilot Console, and Smart Fertigation System.

Peng Bin, CEO of XAG, emphasized the urgent need for a system-based approach to tackle modern agricultural challenges such as rural aging, climate change, and food security. XAG's integrated smart farm solutions—combining autonomous drones, ground robots, fertigation systems, and IoT devices—promise to improve efficiency and reduce production costs for farmers globally.

The event attracted over 150 distributors and partners of XAG from more than 30 countries and regions. Representatives from key markets shared their success stories at XAAC 2024, highlighting the localized impact of XAG technologies.

XAG P150/P60 Agricultural Drone: The Next-Level Efficiency

XAG sets a new benchmark in smart farming with its P150 drone, featuring the highest payload and unmatched efficiency in the international drone market. Through cutting-edge industrial design, intelligent flight ability, and smartphone control, the XAG P150 Agricultural Drone is capable of fulfilling plant protection needs and diverse farming tasks including seeding, fertilizer spreading, and field mapping.

XAG APC2 AutoPilot Console: Navigate with Precision

Breaking through the limitations of traditional autopilot systems, the XAG APC2 Autopilot Console delivers a cost-effective automated steering solution for agricultural machinery such as tractors, transplanters and harvesters, which enables centimeter-level accuracy operation and reduces operator fatigue on farm.

XAG Smart Fertigation System: Manage Farm with a Smartphone

While drones have reshaped pesticide application, the XAG Smart Fertigation System tackles the remaining challenge—bringing precision and efficiency to water and nutrient delivery through smartphones. Together, these integrated technologies complete the smart farming ecosystem, equipping farmers to manage tasks—from plant protection to irrigation and fertigation- all at their fingertips.

XAG Smart Fertigation System can seamlessly integrate with the existing irrigation setups to automate the distribution of water and nutrients. By dissolving fertilizers into liquid form that flows directly to plant roots through pipes, the system optimizes crop nutrition, and controls irrigation timing and volume for maximum efficiency. In an era of labor shortages and resource constraints, this solution achieves more with less.
