Malaysia's DatoDurian revolutionizes the durian industry by blending with blockchain technology

19 February 2025 | News

DatoDurian pioneers Malaysia's farms with First Tokenization of Durian Farm

DatoDurian pioneers Malaysia's farms with First Tokenization of Durian Farm

DatoDurian, Malaysia's first live agriculture tokenization project, proudly announces the completion of its private sale, selling 100% of the initial round. This milestone, achieved ahead of schedule, solidifies DatoDurian's position as the pioneer in blending agriculture and blockchain technology to revolutionize Malaysia's premium durian industry. A private launch event was held in Kuala Lumpur, Malaysia, to celebrate the launch of DatoDurian.

Mantra Chain, a purpose-built RWA Layer 1 Blockchain capable of complying with real world regulatory requirements, will be used by DatoDurian for its public round in the coming weeks. The company has partnered with local government agencies and obtained several licenses to guarantee compliance, solving common blockchain concerns such as speculative risks and scams.

DatoDurian enables investors to own a share of Southeast Asia's most profitable agricultural market by tokenizing durian farms as Real-World Assets (RWAs). The platform provides unprecedented access to a thriving industry, ensuring transparency and long-term stability for investors.

"We're breaking barriers to offer fractional ownership, unparalleled returns, and long-term stabilityâ??all backed by lifetime freehold farmland," said **Bobby Sim, VP of DatoDurian**. "This is more than just an investment; it's the gateway to a booming industry powered by innovation and trust."

John Patrick Mullin, CEO and Co-Founder of MANTRA said, "At MANTRA we're focused on empowering those with high quality asset classes - just like DatoDurian's farms - with the leading protocol and infrastructure they need to seamlessly participate and build solutions in the evolving RWA tokenization space. Just like real estate, agriculture makes a perfect tokenization use case. It's exciting to see how this project could lead to others and the opportunities it will yield."

"One of the biggest benefits of RWA and tokenization is that we're not subject to market crashes. We don't pay attention to bull or bear markets because our profits are not tied to speculation. It's the sale of durian fruit which is in extremely high demand" claims **Warren Burke, VP of Ecosystem**.

DatoDurian also offers free cryptocurrency tokens, such as Bitcoin and Ethereum. This choice from the company enforces their stance on trust and security for all users. "Most of our users come from traditional finance and don't understand Web3 at all. We want to give them a safe and secure channel to learn about blockchain" states **Bobby Sim.**

Empowering Investors Through Innovation

DatoDurian offers fractional ownership of premium durian farms, historically reserved for large-scale investors. The durian industry has long been a cornerstone of wealth in Malaysia, with many farmers earning millionaire status. Now, through DatoDurian, retail investors can participate in this high-yield market.

DatoDurian's blockchain-based security tokens ensure:

- **Transparency**Â in transactions and operations.
- **Bi-annual harvest and dividend payouts**Â for investors.
- **Automated profit distribution**Â without intermediaries.
- **Access to global liquidity**Â via regulated securities markets.

Global Accessibility and Ethical Investments

DatoDurian's tokens are designed to be traded 24-7-365 on several security exchanges globally like **NexStox**, offering seamless global liquidity. The company also adheres to **Shariah principles**, unlocking access to the $445 trillion USD global market that is inaccessible to Islamic Finance.

"RWA offerings have hitherto lacked global liquidity and real yield from real business. This announcement from DatoDurian highlights the immense potential of the market moving forward alongside its commitment to becoming a global pioneer in the RWA space. We're excited about making this available for 24/7 trading on the NexStox group of exchanges and the immense potential it brings." says **NexStox CEO, Cathal Donnellan.**
