

Taiwan Smart Agriweek 2026 to unveil smart solutions and technology for Asian agricultural industry

12 January 2026 | News

Agri-technology market hub, from 8â??10 September 2026

Agri-technology market hub, from 8â??10 September 2026

Taiwan Smart Agriweek, one of the leading smart solutions and technology expos for the agricultural industry in Asia, will be held in TaiNEX 1, Taipei, a strategic gateway to Asia's agri-technology market hub, from 8â??10 September 2026.

The event brings together innovators and solutions providers from agriculture and aquaculture farming, animal health and nutrition, processing, distribution, to waste recycling connecting them with industry stakeholders, including government agencies, industry associations, and research institutions.

Building on recent momentum with over 770 booths, 21,000 visitors from 69 countries, generating USD 88 million in procurement Taiwan Smart Agriweek continues to attract both local and international audiences, creating a platform to connect, engage and network across Asia's agricultural sector.

A Practical Hub for Smart Agriculture in Asia

Known for its strong technology and manufacturing ecosystem, Taiwan is increasingly applying innovation to tackle current farmers' challenges. As the farming workforce continues to age and rising labour shortages, farms are adopting mechanisation, sensors, and automation to improve productivity, operational efficiency, and long-term sustainability.

This progression is further supported by the government through smart agriculture programmes, including IoT deployment and demonstration initiatives that help farmers test, adapt, and scale new solutions. In addition, subsidy programmes aimed at

increasing farmers' adoption of data-driven farm management, precision irrigation, and environmental monitoring are accelerating technology uptake across agricultural operations.

As agri-tech adoption accelerates, Taiwan is emerging as a practical reference point for neighbouring Asian countries, demonstrating how smart agriculture solutions are integrated into daily operations, from AI-based weather monitoring and precision irrigation to feed milling technology, precision nutrition, processing and packaging, and IoT-enabled distribution systems.

These developments also create opportunities for overseas companies to engage and connect with potential buyers from local farmers, agribusiness owners, and government officials through government supported programmes and subsidies.

6-in-1 Show for the Full Farm-to-Fork Experience

With six focused zones in one event, Taiwan Smart Agriweek offers exhibitors a platform to showcase innovative solutions across the agri-industry ecosystem:

- **AGRITECH** – Smart Farming Systems; Agriculture IoT; Agricultural Big Data; Smart Greenhouse Systems; Labour-saving Farm Machinery
- **AGRILIVESTOCK & FEED** – Smart Livestock Farming Systems & Equipment; Precision Feeding Equipment; Alternative Proteins & New Feed Ingredients
- **AQUATECH** – Smart Aquaculture Systems; Aquafeed & Additives, Aquatic Seedlings; Cage Aquaculture Technology; Water Quality Management Equipment
- **AGRIFRESH** – Smart Postharvest Processing Technologies; Cold Storage Warehousing; Smart Grading and Sorting Systems; Smart Cold Chain Energy-Saving Technology
- **AGRIGREEN** – Organic Farming; Agricultural Waste Recycling; Carbon Sequestration and Emission Reduction; Renewable Energy for Agriculture
- **AGRIFOOD** – Local Agri-food Excellence; Food Innovations; Functional Food & Nutrition; Sustainable Food

Combined with on-site forums and collaborations with key institutions, associations, and government bodies, the event will bring together 100+ industry experts and key players to share insights on current market trends and opportunities that are shaping the future of farming.
