Hunan Haili investments RMB 230 Million in New Glufosinate-Ammonium facility to expand mainstream Herbicide footprint

29 July 2026 | News

The chemical producer aims to optimize its profit structure and accelerate its crop protection market share through a 10,000-tonne annual capacity project in Yongxing Economic Development Zone

In a strategic move to optimize its chemical product portfolio and gain a stronger foothold in the mainstream herbicide market, Hunan Haili Chemical Industry Co., Ltd. announced on July 27, 2026, a substantial investment in a new production facility. The company plans to pivot toward glufosinate-ammonium as its primary growth driver, establishing a major manufacturing hub to enhance operational efficiency and diversify revenue streams.

The project will be executed through Hunan Haili's wholly-owned subsidiary, Hunan Haili Yongxing Technology Co., Ltd., located within the Xiangyindu Chemical Industrial Zone of the Yongxing Economic Development Zone. Backed by an estimated investment of RMB 230.0861 million, the planned facility will have an annual production capacity of 10,000 tonnes. Construction is scheduled to span 18 months, focusing on manufacturing glufosinate-P technical concentrate (TK), glufosinate-P soluble concentrate, and related formulation products.

Company leadership underscored that the capital expenditure aligns with Hunan Haili’s long-term vision of innovation-driven, leapfrog development. By establishing dedicated production for high-demand herbicide active ingredients, Hunan Haili aims to overcome current operational bottlenecks, enrich its product offerings, and improve overall profit margins within an increasingly competitive global agrochemical market.
