# Brazilian beef processors Beauvallet and Plena secure US export approvals

16 November 2026 | News

**The new authorisations open the US market to two meat-processing facilities in GoiÃ¡s, while Beauvallet also gains access to the UK, expanding Brazil's international beef trade opportunities.**

Beauvallet Brasil achieved authorisation this Thursday to export beef to the United States and the United Kingdom. This achievement represents a milestone for the operation in Inhumas, Goiás, and opens new business opportunities and market diversification. Obtaining these certifications is a technically demanding process. Access depends on meeting the specific sanitary requirements of each destination and demonstrating compliance with its food safety standards. This requirement demands consistency in controls, documentation, and discipline in the execution of industrial procedures.

In this context, the achievement represents the result of integrated work by the Beauvallet Brazil teams, focusing on preparing the unit and meeting applicable requirements. The involvement of employees and daily attention to processes were fundamental to achieving this goal. With these new certifications, the company expands its commercial opportunities and strengthens its international expansion strategy. The opening of these markets also reinforces its ongoing commitment to quality, food safety, and continuous operational improvement.
